

Power BI Dashboard

Business Insights Report

1. Executive Summary

The dashboard analyses customer purchase behaviour using RFM (Recency, Frequency, Monetary) segmentation across three pages — Customer Overview, Customer Segmentation, and Recommendation. Customers are grouped into five segments: Champions (Best Customers), Loyal Customers, Recent New Customers, At Risk / Can't Lose, and Lost / Hibernating.

The business generated a total of 8.28M in sales across 401,604 transactions. Revenue is heavily concentrated in two segments — At Risk / Can't Lose and Champions — which together account for over 61% of total revenue, making customer retention in these groups a top business priority.

8.28M Total Sales	401,604 Total Orders	5 Customer Segments	At Risk / Can't Lose Top Segment
-----------------------------	--------------------------------	-------------------------------	--

2. Revenue Trend — Seasonality Insight

Insight: Revenue shows a clear seasonal ramp-up starting September (0.93M), peaking in November (1.13M) — the highest month of the year — before dropping in December (0.89M). This pattern is typical of a Q4/holiday-shopping cycle (pre-Christmas ordering peaks in November, with December sales appearing lower likely because the data window ends early-to-mid December, cutting off the final holiday rush).

- February is the weakest month (0.44M) — a good candidate for promotional campaigns to smooth demand.
- April also dips (0.43M), interrupting an otherwise steady spring recovery.
- The Sep→Nov run-up represents the single strongest growth window in the year and should anchor inventory and marketing planning.

3. Revenue Concentration by Segment

Insight: Revenue is dangerously concentrated: At Risk / Can't Lose customers generate the single largest share of revenue (32.5%), even though — by definition — they are the segment most likely to churn. Champions contribute a close second (28.7%). Together, these two segments drive 61.2% of total revenue.

- At Risk / Can't Lose (32.5%): High historical spend but declining recent activity — the single biggest revenue-protection priority.

- Champions (28.7%): Most reliable, highest-value customers — protect and reward to prevent them sliding into 'At Risk'.
- Loyal Customers (23.9%): A healthy base with room to be upgraded into Champions via targeted upsell.
- Lost / Hibernating (9.9%) and Recent New Customers (5.0%) together contribute under 15% of revenue — low current value, but Recent New Customers represent future growth potential if nurtured.

4. Customer Health by Segment (Avg RFM Score)

Insight: Recent New Customers (4.51) and Champions (4.50) have the healthiest RFM scores, but for different reasons — Champions score high on all three dimensions (recent, frequent, high-spend), while Recent New Customers score high mainly on Recency (they just joined) and are still low on Frequency/Monetary. At Risk / Can't Lose has the lowest average score (1.50), confirming long purchase gaps despite historically high spend.

- The gap between Champions (4.50) and At Risk (1.50) is the widest in the dashboard — these are effectively the same type of high-value customer at two different lifecycle stages, separated mainly by recency of purchase.
- Lost / Hibernating (1.78) scores only slightly above At Risk, suggesting many 'At Risk' customers are on the verge of becoming fully 'Lost' if not re-engaged soon.

5. Segment Size vs Revenue Efficiency

Insight: Segment size and revenue broadly move together — At Risk / Can't Lose is both the largest segment (117,892) and the top revenue generator (2.69M) — but Champions punch above their weight: with fewer customers than At Risk (106,195), they generate nearly the same revenue (2.38M), implying a meaningfully higher average spend per customer.

Segment	Total Customers	Total Sales	Avg RFM Score
At Risk / Can't Lose	117,892	2.69M	1.50
Champions (Best Customers)	106,195	2.38M	4.50
Loyal Customers	97,137	1.98M	3.41
Lost / Hibernating	51,306	0.82M	1.78
Recent New Customers	29,074	0.41M	4.51

6. Recommended Actions by Segment

Segment	Recommended Action
At Risk / Can't Lose	Launch immediate win-back campaigns (personalised discounts, reminder emails) — highest revenue at risk of churn.
Champions (Best Customers)	Reward with loyalty perks and early access; protect this high-value, high-health group from slipping into 'At Risk'.
Loyal Customers	Upsell / cross-sell to increase frequency and spend, moving them toward Champion status.
Recent New Customers	Focus on onboarding and second-purchase incentives to build frequency before recency naturally decays.
Lost / Hibernating	Low-cost re-engagement only; deprioritise heavy marketing spend given low historical value.

7. Conclusion

The dashboard highlights a clear retention opportunity: nearly a third of all revenue sits with customers who are already showing signs of disengagement (At Risk / Can't Lose). Combined with Champions, these two segments represent the majority of business value and should receive the majority of retention-focused marketing investment. Meanwhile, the strong November peak suggests Q4 seasonal campaigns are highly effective and should be planned for and reinforced annually.
